The above assemblies and the attachments were tested and approved for use in the field of the roof. It is the designer of record and/or the roofing contractor's responsibility to determine the pressures for all three zones of the roof (field, perimeter, and corners per ASCE-7 05 and the building code) and through extrapolation, the lap spacing for the perimeter and corners zones. Contact IB Should you need assistance. The roofing system must be installed in strict accordance with the current 'IB Roof Systems Specifications Manual and Details', the project specifications, the building code, and good roofing practices by an authorized IB Applicator. Deviations from these requirements, not approved in writing by IB Roof Systems and the Authority Having Jurisdiction are not covered by any or implied IB Roof Systems Warranty.

Approved Insulations: IB ISO, II, III, and IV, R-Max Multi-Max, Hunter, Atlas ACfoam II, III, IV, JM 'NRG', Firestone, GAFTemp Polyisocyanurate Tapered or Flat Stock.

**** Tests are required to verify Adhesive performance per ANSI/SPRI IA-05. The new roofing system can only perform as good, but not better, than Existing Roof system since the new system is adhered to the existing. (1) Does not constitute an FM system. For reference only.**
