RE: Insulated Blanket (I.B.) Roofing Systems

To whom it may concern:

I'm writing this letter in support of the referenced product and application. Over the past 12 years, our agency has used the IB roofing system on numerous (100+) low-income mobile home weatherization projects throughout Lane County.

We've used other products such as the EPDM rubberized membrane, urethane coatings and other conventional torch down systems. Frankly, we haven't seen an equivalent product. The heat welding system allows for a variety of special field applications. Additionally, the edge treatment provides a wide flashing without the annoyance of the screwed down termination bar.

We think the product is superior in terms of durability, maintenance, thermal reflectance and visual compatibility. The decreasing price of PVC also makes this product very cost competitive. We've been consistently pleased with the performance of the PVC membrane and roofing system

Feel free to call me if you have any questions regarding this information. 541-682-2540

Sincerely,

Craig Satchin, Weatherization Supervisor
Housing Authority of Lane County
