

Superior Rooftop Walkway System

Crossgrip™ is a loose laid slip resistant walkway system for high traffic roof-top areas. It is ideal for roof and worker protection in high maintenance rooftop areas, where access for installation and maintenance of Solar Power Systems, HVAC, telecommunications, and auxiliary equipment etc. is necessary.

Protective: With no welding required, tough open-grid construction Crossgrip™ does not impede drainage and elevates the worker off the roof surface. Effective in all weathers while protecting roof membranes from damage. Designed to compliment PVC membrane Roofing materials.

Quick and easy to install: Crossgrip™ is supplied in rolls of 3' by 33'. Simply unroll and place in areas where protection is needed. For more permanent applications, Crossgrip™ can easily be cut on site around obstructions.

Lightweight and portable: Crossgrip™ can be easily moved to reconfigure a walkway, yet is robust enough to resist winds up to 94 mph without being fixed to the roof.

Long lasting: Once installed Crossgrip™ requires no maintenance. Crossgrip™ is 100% PVC which is inherently oil and chemical resistant. Crossgrip™ is temperature rated effective from -9° F to 140° F.

Self-draining: Open grid construction with its 5/8" height allows for excellent drainage particularly when flooding or puddling occurs.

Testing data and Crossgrip™ General Specification can be found at www.plastexmatting.com
